Re: Software Development

Dear Hiring Manager,

I am pleased to learn that there is an opportunity for a Software Developer Intern position. As a student of Computer Programming and Analysis from George Bown College, I have over two years of programming experience. With a passion for technology and creative thinking, I will make a meaningful impact on your software development team's mission.

In college, I have honed the problem-solving and critical thinking skills needed for your programming. My proficiency in object-oriented languages, including Java and Python, and experience with RDBMS gives me a head start in taking on the challenges required of this position.

My interest in computer science outside of academic coursework prepares me to take on diverse challenges with the Interac development team. During the IEEEXtreme 24-hour coding competition, my team was able to code and cooperate effectively under severe time pressure. While my administrative assistant role at Chess'n Math Association required a strong attention to detail and independence, I also taught myself programming to speed up several tasks, such as registration or data collection. As for project experience, I helped IndoPremiere Securities develop a new financial sentiment-analysis AI. My problem-solving experience will allow me to contribute to the Interac platform.

I would greatly appreciate the opportunity to meet and discuss my candidacy in further detail at Interac. I am eager to bring both my learned and practical experience in software development to your organization to make a lasting impact and help you solve real problems. Attached is my resume for your review, and please feel free to contact me at 647-545-9539 or at tjandraaudrey@hotmail.com. Thank you for your time and consideration.

Sincerely,
Audrey Tjandra
